Stoichiometry: Molar Masses, Formulas & Calculations

Printable Flashcards — Pre-Med Chemistry

Moles, Avogadro's number, atomic/molar masses of 50+ compounds, diatomic elements, polyatomic ions, formula writing, limiting reagents, percent yield, molarity, dilution, gas laws, and empirical vs molecular formulas.

193 cards — Print double-sided, flip on long edge, then cut along dashed lines.

1

Stoichiometry in one line: what are we doing?

2

The 4-step stoichiometry routine that saves you every time:

3

Trap: you can balance an equation by changing subscripts in formulas. True or false?

4

What do coefficients in a balanced equation actually mean?

5

Key conversion: moles from grams =

6

Moles = mass / {{c1::molar mass}}.

7

Avogadro's number is basically...

8

Trap: 1 mole = 6.02×10^{23} grams. True or false?

2

1) Balance. 2) Convert to moles. 3) Use mole ratio. 4) Convert to wanted units.

entermedschool.org

1

Using a balanced equation to convert between amounts of reactants and products.

entermedschool.org

4

Mole ratios (and also molecule ratios).

entermedschool.org

3

False.

entermedschool.org

6

Moles = mass / molar mass.

entermedschool.org

5

moles = mass (g) / molar mass (g/mol).

entermedschool.org

8

False.

entermedschool.org

7

6.02×10^{23} particles per mole.

entermedschool.org

9

Particles to moles conversion:

10

Moles to particles conversion:

11

What is molar mass (in plain words)?

12

How do you find molar mass
of a compound quickly?

13

Trap: coefficients change the
molar mass. True or false?

14

Big pre-med trick: always write
units at every step because...

15

Quick formula you should know cold: density =

16

If you have a solution and you
know molarity (M), moles =

10

$$\text{particles} = \text{moles} \times (6.02 \times 10^{23}).$$

entermedschool.org

9

$$\text{moles} = \text{particles} / (6.02 \times 10^{23}).$$

entermedschool.org

12

Add atomic masses for every atom in the formula (watch subscripts + parentheses).

entermedschool.org

11

The mass of 1 mole of a substance (in g/mol).

entermedschool.org

14

It tells you if your conversion makes sense.

entermedschool.org

13

False.

entermedschool.org

16

$$\text{moles} = M \times \text{volume (L)}.$$

entermedschool.org

15

$$\text{mass} / \text{volume (d} = \text{m/V)}.$$

entermedschool.org

17

Molarity: $M = \frac{\text{moles}}{\text{liters}}$.

18

Trap: if volume is in mL, you can plug it directly into molarity formula. True or false?

19

Atomic mass of Hydrogen (H) is about (g/mol):

20

Atomic mass of Carbon (C) is about (g/mol):

21

Atomic mass of Nitrogen (N) is about (g/mol):

22

Atomic mass of Oxygen (O) is about (g/mol):

23

Atomic mass of Fluorine (F) is about (g/mol):

24

Atomic mass of Sodium (Na) is about (g/mol):

18

False.

entermedschool.org

17

Molarity: $M = \text{moles/liters}$.

entermedschool.org

31

39

entermedschool.org

33

Atomic mass of Iron (Fe) is about (g/mol):

34

Atomic mass of Copper (Cu) is about (g/mol):

35

Atomic mass of Zinc (Zn) is about (g/mol):

36

Atomic mass of Bromine (Br) is about (g/mol):

37

Atomic mass of Iodine (I) is about (g/mol):

38

Atomic mass of Silver (Ag) is about (g/mol):

39

Atomic mass of Barium (Ba) is about (g/mol):

40

The 4 numbers you use constantly
in molar mass questions:

34

63.5

entermedschool.org

33

56

entermedschool.org

36

80

entermedschool.org

35

65

entermedschool.org

38

108

entermedschool.org

37

127

entermedschool.org

40

H=1, C=12, N=14, O=16.

entermedschool.org

39

137

entermedschool.org

41

Quick atomic mass set: $H = \{c1::1\}$,
 $C = \{c2::12\}$, $N = \{c3::14\}$, $O = \{c4::16\}$,
 $Na = \{c5::23\}$, $Cl = \{c6::35.5\}$.

42

Diatomic elements you must
remember (when they're 'alone'):

43

Trap: oxygen gas is written as O. True or false?

44

Elemental nitrogen in equations is written as:

45

Elemental chlorine in equations is written as:

46

Halogens as elements are diatomic: $\{c1::F_2\}$,
 $\{c2::Cl_2\}$, $\{c3::Br_2\}$, $\{c4::I_2\}$.

47

Molar mass of H_2O (g/mol):

48

Molar mass of H_2O_2 (g/mol):

42

H₂, N₂, O₂, F₂, Cl₂, Br₂, I₂.

entermedschool.org

41

Quick atomic mass set: H=1, C=12,
N=14, O=16, Na=23, Cl=35.5.

entermedschool.org

44

N₂

entermedschool.org

43

False.

entermedschool.org

46

Halogens as elements are
diatomic: F₂, Cl₂, Br₂, I₂.

entermedschool.org

45

Cl₂

entermedschool.org

48

34

entermedschool.org

47

18

entermedschool.org

49

Molar mass of CO₂ (g/mol):

50

Molar mass of CO (g/mol):

51

Molar mass of O₂ (g/mol):

52

Molar mass of N₂ (g/mol):

53

Molar mass of NH₃ (g/mol):

54

Molar mass of CH₄ (g/mol):

55

entermedschool.org

97

Molar mass of BaSO_4 (g/mol):

98

Quick trap: CO and N_2 have the same molar mass. What is it?

99

Another sneaky one: NaHCO_3 and MgCO_3 have the same molar mass. What is it?

100

H_2SO_4 and H_3PO_4 both have molar mass...?

101

9 g of water is how many moles? ($\text{H}_2\text{O} = 18 \text{ g/mol}$)

102

How many grams are in 0.25 mol of CO_2 ? (44 g/mol)

103

How many moles are in 22 g of CO_2 ? (44 g/mol)

104

How many moles are in 58.5 g of NaCl ?

98

28 g/mol.

entermedschool.org

97

233

entermedschool.org

100

98 g/mol.

entermedschool.org

99

84 g/mol.

entermedschool.org

102

11 g.

entermedschool.org

101

0.50 mol.

entermedschool.org

104

1.00 mol.

entermedschool.org

103

0.50 mol.

entermedschool.org

105

How many molecules are in 0.50 mol of anything?

106

How many moles is 1.204×10^{24} molecules?

107

$2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$. If you have 3 mol O_2 (and lots of H_2), max moles H_2O you can make?

108

$2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$. If you have 5 mol H_2 (and lots of O_2), max moles H_2O ?

109

$\text{N}_2 + 3\text{H}_2 \rightarrow 2\text{NH}_3$. If you have 3 mol H_2 (excess N_2), how many mol NH_3 ?

110

$\text{N}_2 + 3\text{H}_2 \rightarrow 2\text{NH}_3$. If you have 1 mol N_2 (excess H_2), how many mol NH_3 ?

111

$\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$. If you burn 1 mol CH_4 , moles of CO_2 produced?

112

$\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$. If you burn 2 mol CH_4 (excess O_2), moles of H_2O produced?

106

2.00 mol.

entermedschool.org

105

3.01×10^{23} particles.

entermedschool.org

108

5 mol H₂O.

entermedschool.org

107

6 mol H₂O.

entermedschool.org

110

2 mol NH₃.

entermedschool.org

109

2 mol NH₃.

entermedschool.org

112

4 mol H₂O.

entermedschool.org

111

1 mol CO₂.

entermedschool.org

113

$\text{CaCO}_3 \rightarrow \text{CaO} + \text{CO}_2$. If 0.20 mol CaCO_3 decomposes, how many mol CO_2 ?

114

$\text{CaCO}_3 \rightarrow \text{CaO} + \text{CO}_2$. If you start with 10.0 g CaCO_3 (100 g/mol), moles CO_2 produced?

115

$\text{HCl} + \text{NaOH} \rightarrow \text{NaCl} + \text{H}_2\text{O}$. If you have 0.30 mol HCl and 0.30 mol NaOH , which is limiting?

116

Limiting reagent in one sentence: it's the reactant that...

117

Fast limiting reagent method that avoids confusion:

118

$2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$. You have 4 mol H_2 and 1 mol O_2 . Limiting reactant?

119

Same reaction: 4 mol H_2 + 1 mol $\text{O}_2 \rightarrow$ how many mol H_2O form?

120

Same reaction: how many mol H_2 are left over after reaction?

114

0.10 mol CO₂.entermedschool.org

113

0.20 mol CO₂.entermedschool.org

116

Runs out first (based on the balanced mole ratio).

entermedschool.org

115

Neither: it's exactly stoichiometric (1:1).

entermedschool.org

118

O₂ is limiting.entermedschool.org

117

Convert each reactant to moles
of the SAME product. Smaller
product amount = limiting reactant.entermedschool.org

120

2 mol H₂ left.entermedschool.org

119

2 mol H₂O.entermedschool.org

121

$\text{N}_2 + 3\text{H}_2 \rightarrow 2\text{NH}_3$. You have 2 mol N_2 and 3 mol H_2 . Limiting reactant?

122

Same reaction: with 2 mol N_2 and 3 mol H_2 , how many mol NH_3 can form?

123

Same reaction: how many mol N_2 are left?

124

$\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$. You have 1.0 mol CH_4 and 1.5 mol O_2 . Limiting reactant?

125

Same reaction: with 1.0 mol CH_4 and 1.5 mol O_2 , how many mol CO_2 form?

126

Trap: to find limiting reactant, compare grams of reactants directly. True or false?

127

Theoretical yield means...

128

Actual yield means...

122

2 mol NH₃.

entermedschool.org

121

H₂ is limiting.

entermedschool.org

124

O₂ is limiting.

entermedschool.org

123

1 mol N₂ left.

entermedschool.org

126

False.

entermedschool.org

125

0.75 mol CO₂.

entermedschool.org

128

The product you **ACTUALLY** got in the lab.

entermedschool.org

127

The maximum product you **CAN** make if everything reacts perfectly.

entermedschool.org

129

Percent yield formula:

130

Trap: percent yield can be above 100% and that's always fine. True or false?

131

Percent yield =
 $\left(\frac{\text{actual}}{\text{theoretical}}\right) \times 100\%$.

132

Molarity (M) tells you...

133

If you have 250 mL of a 0.20 M NaCl solution, how many moles of NaCl is that?

134

Same question but trap version:
250 mL of 0.20 M has moles =

135

How many grams of NaCl to make 500 mL of 0.10 M NaCl? (NaCl=58.5 g/mol)

136

Dilution equation you should know:

130

False (usually).

entermedschool.org

129

percent yield = (actual / theoretical) × 100%.

entermedschool.org

132

How many moles of solute are in 1 liter of solution.

entermedschool.org

131

Percent yield = (actual/theoretical) × 100%.

entermedschool.org

134

0.050 mol, not 50 mol.

entermedschool.org

133

0.050 mol.

entermedschool.org

136

M1V1 = M2V2 (same solute, just adding solvent).

entermedschool.org

135

2.93 g (about 2.9 g).

entermedschool.org

137

2.0 M stock \rightarrow make 250 mL of 0.50 M. How many mL of stock do you need?

138

Trap: in $M_1V_1=M_2V_2$, V is the volume of solvent. True or false?

139

If you dilute a solution by adding water, what happens to moles of solute?

140

Quick check: 5.85 g NaCl per liter corresponds to what molarity? (NaCl=58.5 g/mol)

141

Concentration trap: if a label says 10% (w/w), that means...

142

ppm (parts per million) in water is often treated as...

143

Dilution: $\{c_1::M_1V_1\} = \{c_2::M_2V_2\}$.

144

Ideal gas law:

138

False.

entermedschool.org

137

62.5 mL.

entermedschool.org

140

0.10 M.

entermedschool.org

139

They stay the same.

entermedschool.org

142

mg/L (because 1 L water ~ 1 kg).

entermedschool.org

141

10 g solute per 100 g solution.

entermedschool.org

144

$PV = nRT.$

entermedschool.org

143

Dilution: $M_1V_1 = M_2V_2.$

entermedschool.org

145

Trap: in $PV=nRT$, temperature must be in...

146

Celsius to Kelvin conversion:

147

At 0°C and 1 atm (classic STP), 1 mol of ideal gas occupies about...

148

At 25°C and 1 atm (room-ish), 1 mol of gas is closer to...

149

If a gas volume is given at STP and you need moles fast:

150

Example: 11.2 L of O_2 at STP is how many moles?

151

Example: 44.8 L of CO_2 at STP is how many moles?

152

If you only change temperature (P constant), gas volume is proportional to...

146

$$K = ^\circ C + 273.$$

entermedschool.org

145

Kelvin (K).

entermedschool.org

148

24 L (about 24.5 L).

entermedschool.org

147

22.4 L.

entermedschool.org

150

0.50 mol.

entermedschool.org

149

$$n = V / 22.4 \text{ (with } V \text{ in liters).}$$

entermedschool.org

152

Temperature in Kelvin.

entermedschool.org

151

2.00 mol.

entermedschool.org

153

R value you see most with
L and atm units is about...

154

Ideal gas law: $\{c1::PV\} = \{c2::nRT\}$.

155

At STP, 1 mol ideal gas volume (L/mol):

156

Common polyatomic ion: Ammonium

157

Common polyatomic ion: Hydroxide

158

Common polyatomic ion: Nitrate

159

Common polyatomic ion: Nitrite

160

Common polyatomic ion: Sulfate

154

Ideal gas law: $PV = nRT$.entermedschool.org

153

 $0.0821 \text{ L} \cdot \text{atm}/(\text{mol} \cdot \text{K})$.entermedschool.org

156

 NH_4^+ (charge +1)entermedschool.org

155

22.4

entermedschool.org

158

 NO_3^- (charge -1)entermedschool.org

157

 OH^- (charge -1)entermedschool.org

160

 SO_4^{2-} (charge -2)entermedschool.org

159

 NO_2^- (charge -1)entermedschool.org

161

Common polyatomic ion: Sulfite

162

Common polyatomic ion: Carbonate

163

Common polyatomic ion:
Bicarbonate (hydrogen carbonate)

164

Common polyatomic ion: Phosphate

165

Common polyatomic ion: Acetate

166

Common polyatomic ion: Permanganate

167

Fast way to write an ionic formula:

168

Trap: ionic formula keeps the charges
written in it (like Na^+Cl^-). True or false?

162

entermedschool.org

161

entermedschool.org

164

entermedschool.org

163

entermedschool.org

166

entermedschool.org

165

entermedschool.org

168

False.

entermedschool.org

167

Make total charge = 0 (use the smallest whole-number ratio).

entermedschool.org

169

When do you need parentheses in a formula?

170

Trap: $\text{Ca}(\text{NO}_3)_2$ can be written as CaNO_3_2 . True or false?

171

Write the formula for calcium chloride.

172

Write the formula for aluminum oxide.

173

Write the formula for magnesium hydroxide.

174

Write the formula for sodium carbonate.

175

Write the formula for calcium nitrate.

176

Write the formula for ammonium sulfate.

170

False.

entermedschool.org

169

When you have more than one of a polyatomic ion.

entermedschool.org

172

 Al_2O_3

entermedschool.org

171

 CaCl_2

entermedschool.org

174

 Na_2CO_3

entermedschool.org

173

 $\text{Mg}(\text{OH})_2$

entermedschool.org

176

 $(\text{NH}_4)_2\text{SO}_4$

entermedschool.org

175

 $\text{Ca}(\text{NO}_3)_2$

entermedschool.org

177

Write the formula for aluminum sulfate.

178

Write the formula for sodium phosphate.

179

Write the formula for ammonium nitrate.

180

Iron and copper trap: why do they often have roman numerals in names (iron(II), iron(III))?

181

Example: iron(III) chloride formula is...

182

Example: iron(II) chloride formula is...

183

Parentheses rule: use parentheses when a `{{c1::polyatomic ion}}` appears more than `{{c2::once}}` in the formula (ex: $\text{Ca}(\text{NO}_3)_2$).

184

Percent composition (by mass) of an element in a compound is...

178

entermedschool.org

177

entermedschool.org

180

Because they can form more than one ion charge.

entermedschool.org

179

entermedschool.org

182

entermedschool.org

181

entermedschool.org

184

(mass of that element in 1 mole of compound
/ molar mass of compound) \times 100%.

entermedschool.org

183

Parentheses rule: use parentheses when
a polyatomic ion appears more than
once in the formula (ex: $\text{Ca}(\text{NO}_3)_2$).

entermedschool.org

185

Empirical formula means...

186

Molecular formula means...

187

Trap: empirical formula and molecular formula are always the same. True or false?

188

Fast empirical formula workflow from percentages:

189

If your mole ratios come out like 1 : 1.5 : 1, what do you do?

190

From empirical formula to molecular formula: key step is...

191

Example idea: empirical formula CH_2O has mass 30 g/mol. If molar mass is 180, the multiplier is...

192

Combustion analysis core idea (high-level):

186

Actual numbers of each atom in the molecule.

entermedschool.org

185

Simplest whole-number ratio
of atoms in a compound.

entermedschool.org

188

1) Assume 100 g. 2) Convert g to moles. 3)
Divide by smallest. 4) Multiply to clear decimals.

entermedschool.org

187

False.

entermedschool.org

190

Find the multiplier: (molar
mass / empirical formula mass).

entermedschool.org

189

Multiply everything by 2 -> 2 : 3 : 2.

entermedschool.org

192

All C ends up in CO₂, all H ends up
in H₂O (use masses to back-calculate
C and H in the original compound).

entermedschool.org

191

6 (and molecular formula is C₆H₁₂O₆).

entermedschool.org

193

Empirical formula = simplest whole-number ratio of atoms; molecular formula = actual numbers of atoms.

193

Empirical formula = simplest whole-number ratio of atoms; molecular formula = actual numbers of atoms.
