VSEPR: Molecular Geometry, Angles & Exceptions

Printable Flashcards — Pre-Med Chemistry

VSEPR theory, electron domains, AXE notation, ideal bond angles, lone pair effects, trigonal bipyramidal/octahedral shapes, expanded octet exceptions, hybridization, and shapes for 40+ common molecules.

170 cards — Print double-sided, flip on long edge, then cut along dashed lines.

1

VSEPR in one sentence: what's the point?

2

The 4-step VSEPR workflow (fast and reliable):

3

Electron group (electron domain) means...

4

Trap: double bonds count as 2 electron groups in VSEPR. True or false?

5

Electron geometry vs molecular geometry (what's the clean difference)?

6

Steric number (SN) shortcut =

7

Why does VSEPR care about sigma bonds (not pi bonds) for counting?

8

If a question gives you the shape and asks for steric number, remember:

2

- 1) Draw Lewis.
- 2) Count electron groups on central atom.
- 3) Get electron geometry.
- 4) Remove lone pairs -> molecular shape.

entermedschool.org

1

Electron groups around a central atom repel, so they spread out to be as far apart as possible.

entermedschool.org

4

False.

entermedschool.org

3

Any region of electron density: single bond, double bond, triple bond, or lone pair.

entermedschool.org

6

$SN = (\# \text{ of sigma bonds}) + (\# \text{ of lone pairs})$ on the central atom.

entermedschool.org

5

Electron geometry counts bonds + lone pairs. Molecular geometry describes the shape made by the atoms only.

entermedschool.org

8

Steric number is the electron geometry count (bonds + lone pairs).

entermedschool.org

7

Because the sigma bond is the main direction/region of electron density between atoms.

entermedschool.org

9

VSEPR counting rule: single, double, and triple bonds each count as $\{c1::one\}$ electron group.

10

VSEPR stands for:

11

2 electron groups \rightarrow electron geometry:

12

3 electron groups \rightarrow electron geometry:

13

4 electron groups \rightarrow electron geometry:

14

5 electron groups \rightarrow electron geometry:

15

6 electron groups \rightarrow electron geometry:

16

Quick angle set to memorize: linear, trigonal planar, tetrahedral are...

10

Valence Shell Electron Pair Repulsion

entermedschool.org

9

VSEPR counting rule: single, double, and triple bonds each count as one electron group.

entermedschool.org

12

Trigonal planar (120°).

entermedschool.org

11

Linear (180°).

entermedschool.org

14

Trigonal bipyramidal (90° , 120° , 180°).

entermedschool.org

13

Tetrahedral (109.5°).

entermedschool.org

16

180° , 120° , 109.5° .

entermedschool.org

15

Octahedral (90° , 180°).

entermedschool.org

17

Electron geometry cheat: 2 -> $\{\{c1::linear\}\}$,
3 -> $\{\{c2::trigonal\ planar\}\}$, 4 ->
 $\{\{c3::tetrahedral\}\}$, 5 -> $\{\{c4::trigonal\}$
bipyramidal $\}$, 6 -> $\{\{c5::octahedral\}\}$.

18

Ideal bond angle for a
tetrahedral electron geometry:

19

AXE notation: what does it mean?

20

AX2 with no lone pairs gives what molecular shape?

21

AX3 with no lone pairs gives what molecular shape?

22

AX4 with no lone pairs gives what molecular shape?

23

AX3E1 gives what molecular shape?

24

AX2E2 gives what molecular shape?

18

 109.5° entermedschool.org

17

Electron geometry cheat: 2 -> linear, 3 -> trigonal planar, 4 -> tetrahedral, 5 -> trigonal bipyramidal, 6 -> octahedral.

entermedschool.org

20

Linear (180°).entermedschool.org

19

A = central atom, X = bonded atoms,
E = lone pairs on central atom.

entermedschool.org

22

Tetrahedral (109.5°).entermedschool.org

21

Trigonal planar (120°).entermedschool.org

24

Bent/V-shaped ($\sim 104.5^\circ$ if it's like H₂O).entermedschool.org

23

Trigonal pyramidal ($\sim 107^\circ$ if it's like NH₃).entermedschool.org

25

AX2E1 gives what shape and angle (typical)?

26

AXE quick: AX3E1 = {c1::trigonal pyramidal}; AX2E2 = {c2::bent}.

27

AXE for water (H2O):

28

Bond angles get smaller when you add lone pairs because...

29

Trap: NH3 has 109.5° because it comes from tetrahedral geometry. True or false?

30

Trap: H2O has a 120° bond angle because it's bent. True or false?

31

Order the angles (largest -> smallest): CH4, NH3, H2O

32

Why does H2O have a smaller angle than NH3 (even though both are 'tetrahedral-based')?

26

AXE quick: AX3E1 = trigonal pyramidal; AX2E2 = bent.

entermedschool.org

25

Bent, with angle slightly less than 120° .

entermedschool.org

28

Lone pairs repel more strongly than bonding pairs and squeeze bonds closer together.

entermedschool.org

27

AX2E2

entermedschool.org

30

False.

entermedschool.org

29

False.

entermedschool.org

32

H2O has 2 lone pairs, NH3 has 1 lone pair.
More lone pairs -> more compression.

entermedschool.org

31

CH4 (109.5°) > NH3 ($\sim 107^\circ$) > H2O ($\sim 104.5^\circ$).

entermedschool.org

33

Multiple bonds vs single bonds:
which repels more (in VSEPR)?

34

Trap: resonance changes the
VSEPR shape. True or false?

35

Repulsion strength: lone pair-lone pair > $\{\{c1::lone\}$
pair-bond pair $\}\}$ > bond pair-bond pair.

36

Approximate H-O-H bond angle in water:

37

Trigonal bipyramidal has two types of positions:

38

In trigonal bipyramidal, lone pairs prefer...

39

Trap: in trigonal bipyramidal, lone pairs prefer
axial because they're far apart. True or false?

40

AX5 (no lone pairs) shape:

34

Usually false for basic VSEPR.

entermedschool.org

33

Multiple bonds repel more strongly
(they are electron-density heavier).

entermedschool.org

36

104.5°

entermedschool.org

35

Repulsion strength: lone pair-lone pair >
lone pair-bond pair > bond pair-bond pair.

entermedschool.org

38

Equatorial positions.

entermedschool.org

37

Equatorial (3 positions, 120° apart)
and axial (2 positions, 180° apart).

entermedschool.org

40

Trigonal bipyramidal (90°, 120°, 180°).

entermedschool.org

39

False.

entermedschool.org

41

AX4E1 (5 domains) shape:

42

AX3E2 (5 domains) shape:

43

AX2E3 (5 domains) shape:

44

Common trap: 'linear always means 2 electron groups'. Fix it:

45

5 domains shapes: AX5 = {{c1::trigonal bipyramidal}}, AX4E1 = {{c2::seesaw}}, AX3E2 = {{c3::T-shaped}}, AX2E3 = {{c4::linear}}.

46

Molecular shape of SF4:

47

AX6 (no lone pairs) shape:

48

AX5E1 (6 domains) shape:

42

T-shaped.

entermedschool.org

41

Seesaw.

entermedschool.org

44

Linear molecular shape can also come from 5 domains (AX₂E₃) or 6 domains (AX₂E₄).

entermedschool.org

43

Linear (180°).

entermedschool.org

46

Seesaw

entermedschool.org

45

5 domains shapes: AX₅ = trigonal bipyramidal, AX₄E₁ = seesaw, AX₃E₂ = T-shaped, AX₂E₃ = linear.

entermedschool.org

48

Square pyramidal.

entermedschool.org

47

Octahedral (90°, 180°).

entermedschool.org

49

AX4E2 (6 domains) shape:

50

Trap: square planar comes from trigonal bipyramidal. True or false?

51

Angles in square planar are ideally...

52

AX2E4 (6 domains) gives what molecular shape?

53

6 domains shapes: AX6 = {c1::octahedral},
AX5E1 = {c2::square pyramidal},
AX4E2 = {c3::square planar}.

54

Molecular shape of XeF4:

55

Expanded octet: which atoms can have more than 8 electrons around them (basic rule)?

56

Trap: nitrogen can make 5 bonds like phosphorus (NF5). True or false?

50

False.

entermedschool.org

49

Square planar.

entermedschool.org

52

Linear (180°).

entermedschool.org

51

90° and 180° .

entermedschool.org

54

Square planar

entermedschool.org

53

6 domains shapes: AX6 = octahedral, AX5E1 = square pyramidal, AX4E2 = square planar.

entermedschool.org

56

False.

entermedschool.org

55

Period 3 and below (like P, S, Cl, Br, I, Xe).

entermedschool.org

57

Classic expanded-octet molecules
you should recognize fast:

58

Odd-electron molecules (radicals)
are an 'octet exception' because...

59

Trap: every stable molecule has a perfect
octet around every atom. True or false?

60

Incomplete octet examples you should know:

61

Trap: BF_3 must be tetrahedral because
boron wants 8 electrons. True or false?

62

Octet exceptions: incomplete octet ($\{\{\text{c1::B, Be}\}\}$),
expanded octet ($\{\{\text{c2::period 3+}\}\}$),
odd-electron species ($\{\{\text{c3::radicals}\}\}$).

63

VSEPR: CO_2 shape and typical bond angle?

64

VSEPR: HCN shape and typical bond angle?

58

They have an odd number of electrons,
so someone can't complete an octet.

entermedschool.org

57

PCl₅ (5 groups), SF₆ (6 groups), XeF₄ (6 groups).

entermedschool.org

60

BeCl₂ (Be often has 4 e⁻), BF₃ (B often has 6 e⁻).

entermedschool.org

59

False.

entermedschool.org

62

Octet exceptions: incomplete octet
(B, Be), expanded octet (period
3+), odd-electron species (radicals).

entermedschool.org

61

False.

entermedschool.org

64

Linear; 180°.

entermedschool.org

63

Linear; 180°.

entermedschool.org

65

VSEPR: BeCl_2 shape and typical bond angle?

66

VSEPR: BF_3 shape and typical bond angle?

67

VSEPR: SO_3 shape and typical bond angle?

68

VSEPR: NO_3^- shape and typical bond angle?

69

VSEPR: CO_3^{2-} shape and typical bond angle?

70

VSEPR: CH_4 shape and typical bond angle?

71

VSEPR: NH_4^+ shape and typical bond angle?

72

VSEPR: SO_4^{2-} shape and typical bond angle?

66

Trigonal planar; 120° .

entermedschool.org

65

Linear; 180° .

entermedschool.org

68

Trigonal planar; 120° .

entermedschool.org

67

Trigonal planar; 120° .

entermedschool.org

70

Tetrahedral; 109.5° .

entermedschool.org

69

Trigonal planar; 120° .

entermedschool.org

72

Tetrahedral; 109.5° .

entermedschool.org

71

Tetrahedral; 109.5° .

entermedschool.org

73

VSEPR: ClO_4^- shape and typical bond angle?

74

VSEPR: NH_3 shape and typical bond angle?

75

VSEPR: PF_3 shape and typical bond angle?

76

VSEPR: H_2O shape and typical bond angle?

77

VSEPR: OF_2 shape and typical bond angle?

78

VSEPR: SO_2 shape and typical bond angle?

79

VSEPR: O_3 shape and typical bond angle?

80

VSEPR: PCl_5 shape and typical bond angle?

74

Trigonal pyramidal; $\sim 107^\circ$.

entermedschool.org

73

Tetrahedral; 109.5° .

entermedschool.org

76

Bent; $\sim 104.5^\circ$.

entermedschool.org

75

Trigonal pyramidal; $\sim 107^\circ$.

entermedschool.org

78

Bent; $< 120^\circ$ (about 119°).

entermedschool.org

77

Bent; $\sim 103^\circ$ (smaller than water).

entermedschool.org

80

Trigonal bipyramidal; $90^\circ/120^\circ/180^\circ$.

entermedschool.org

79

Bent; $< 120^\circ$.

entermedschool.org

81

VSEPR: SF₄ shape and typical bond angle?

82

VSEPR: ClF₃ shape and typical bond angle?

83

VSEPR: XeF₂ shape and typical bond angle?

84

VSEPR: I³⁻ shape and typical bond angle?

85

VSEPR: SF₆ shape and typical bond angle?

86

VSEPR: BrF₅ shape and typical bond angle?

87

VSEPR: XeF₄ shape and typical bond angle?

88

Shape of CO₂:

82

T-shaped; $\sim 90^\circ$ (distorted).

entermedschool.org

81

Seesaw; $< 90^\circ$ and $< 120^\circ$ (distorted).

entermedschool.org

84

Linear; 180° .

entermedschool.org

83

Linear; 180° .

entermedschool.org

86

Square pyramidal; $\sim 90^\circ$ (distorted).

entermedschool.org

85

Octahedral; $90^\circ/180^\circ$.

entermedschool.org

88

Linear

entermedschool.org

87

Square planar; $90^\circ/180^\circ$.

entermedschool.org

89

Bond angle in CO₂:

90

Shape of BF₃:

91

Ideal bond angle in BF₃:

92

Shape of CH₄:

93

Ideal bond angle in CH₄:

94

Shape of NH₃:

95

Approximate H-N-H angle in NH₃:

96

Shape of H₂O:

90

Trigonal planar

entermedschool.org

89

180°

entermedschool.org

92

Tetrahedral

entermedschool.org

91

120°

entermedschool.org

93

109.5°

entermedschool.org

96

Bent

entermedschool.org

95

~107°

entermedschool.org

97

Approximate H-O-H angle in H₂O:

98

Shape of PCl₅:

99

Shape of SF₆:

100

Shape of XeF₄:

101

Shape of XeF₂:

102

CO₂ has two double bonds. Electron geometry is... and molecular geometry is...

103

SO₂: electron geometry vs molecular geometry?

104

NH₃: electron geometry vs molecular geometry?

98

Trigonal bipyramidal

entermedschool.org

97

$\sim 104.5^\circ$

entermedschool.org

100

Square planar

entermedschool.org

99

Octahedral

entermedschool.org

102

Electron geometry: linear.
Molecular geometry: linear.

entermedschool.org

101

Linear

entermedschool.org

104

Electron geometry: tetrahedral.
Molecular geometry: trigonal pyramidal.

entermedschool.org

103

Electron geometry: trigonal planar.
Molecular geometry: bent.

entermedschool.org

105

H₂O: electron geometry vs molecular geometry?

106

Trap: if the molecule is bent, electron geometry must be trigonal planar. True or false?

107

How do you tell which 'bent' you have (AX₂E₁ vs AX₂E₂)?

108

Trap: NO₃⁻ is trigonal pyramidal because it has 3 oxygens. True or false?

109

Trap: CO₃²⁻ is tetrahedral because it has 3 oxygens and a charge. True or false?

110

Trap: SO₄²⁻ is trigonal planar because sulfur is in the middle. True or false?

111

NH₃: electron geometry $\{\{c1::tetrahedral\}\}$,
molecular geometry $\{\{c2::trigonal\ pyramidal\}\}$.

112

SO₂ molecular geometry:

106

False.

entermedschool.org

105

Electron geometry: tetrahedral.
Molecular geometry: bent.

entermedschool.org

108

False.

entermedschool.org

107

Count total electron groups on the
central atom (bonds + lone pairs).

entermedschool.org

110

False.

entermedschool.org

109

False.

entermedschool.org

112

Bent

entermedschool.org

111

NH₃: electron geometry tetrahedral,
molecular geometry trigonal pyramidal.

entermedschool.org

113

Why is CH₄ tetrahedral, not square planar?

114

Why is BF₃ trigonal planar, not tetrahedral?

115

Why is CO₂ linear, even though it has 2 double bonds?

116

Why do lone pairs compress bond angles (real reason)?

117

Why do trigonal bipyramidal lone pairs go equatorial?

118

Why is XeF₂ linear even though xenon has 5 electron groups?

119

Why is XeF₄ square planar instead of tetrahedral?

120

If you ever forget a shape, what's the 'always works' move?

114

Boron has only 3 electron groups (3 bonds, no lone pair).

entermedschool.org

113

Because 4 electron groups spread out in 3D to minimize repulsion (tetrahedral is best).

entermedschool.org

116

Lone pairs sit closer to the central atom and take up more space, so they push bonding pairs together.

entermedschool.org

115

Because carbon still has only 2 electron groups, so they go opposite (180°).

entermedschool.org

118

Because the 3 lone pairs take equatorial spots, leaving 2 bonds opposite (axial).

entermedschool.org

117

Equatorial positions have fewer 90° interactions, so repulsion is lower.

entermedschool.org

120

Count electron groups and match them to the 2-3-4-5-6 electron geometry table.

entermedschool.org

119

Because it has 6 electron groups total; electron geometry is octahedral, and 2 lone pairs sit opposite.

entermedschool.org

121

Hybridization shortcut: steric number 2 ->

122

Hybridization shortcut: steric number 3 ->

123

Hybridization shortcut: steric number 4 ->

124

Hybridization shortcut: steric number 5 ->

125

Hybridization shortcut: steric number 6 ->

126

Trap: double bonds change hybridization count by adding a domain. True or false?

127

Hybridization of carbon in CO₂:

128

Hybridization of boron in BF₃:

122

sp².

entermedschool.org

121

sp.

entermedschool.org

124

sp³d.

entermedschool.org

123

sp³.

entermedschool.org

126

False.

entermedschool.org

125

sp³d².

entermedschool.org

128

sp²

entermedschool.org

127

sp

entermedschool.org

129

Hybridization of oxygen in H₂O:

130

Steric number \rightarrow hybridization:
2 = {c1::sp}, 3 = {c2::sp²}, 4 = {c3::sp³},
5 = {c4::sp³d}, 6 = {c5::sp³d²}.
}

131

In VSEPR, you should count electron groups around which atom?

132

Trap: hydrogen can be the central atom in H₂O₂. True or false?

133

How to pick the central atom quickly (most of the time)?

134

Trap: the central atom is always the one written first in the formula. True or false?

135

When counting electron groups, a lone pair counts as...

136

Trap: if you can't see a lone pair in the formula, it doesn't exist. True or false?

130

Steric number \rightarrow hybridization: 2= sp ,
3= sp^2 , 4= sp^3 , 5= sp^3d , 6= sp^3d^2 .

entermedschool.org

129

sp^3

entermedschool.org

132

False.

entermedschool.org

131

The central atom (usually the
least electronegative, not H).

entermedschool.org

134

False.

entermedschool.org

133

The least electronegative atom (except H).

entermedschool.org

136

False.

entermedschool.org

135

One electron group.

entermedschool.org

137

Quick: central carbon in carbonate (CO_3^{2-}) has how many electron groups?

138

Quick: central sulfur in sulfate (SO_4^{2-}) has how many electron groups?

139

Quick: central sulfur in SO_2 has how many electron groups?

140

Number of electron groups around nitrogen in NH_3 :

141

Ideal bond angle in linear geometry:

142

Ideal bond angle in trigonal planar geometry:

143

Ideal bond angle in tetrahedral geometry:

144

Angles present in trigonal bipyramidal geometry:

138

4.

entermedschool.org

137

3.

entermedschool.org

140

4

entermedschool.org

139

3 (2 bonds + 1 lone pair).

entermedschool.org

142

120°

entermedschool.org

141

180°

entermedschool.org

144

$90^\circ, 120^\circ, 180^\circ$

entermedschool.org

143

109.5°

entermedschool.org

145

Angles present in octahedral geometry:

146

Real molecules vs ideal angles: why are angles sometimes 'not exactly' the ideal ones?

147

Largest to smallest (tetrahedral-based): CH_4 ($\{c1::109.5\}$) > NH_3 ($\{c2::~\sim 107\}$) > H_2O ($\{c3::~\sim 104.5\}$).

148

Shape name for AX₃E₂ (5 electron groups):

149

Shape name for AX₄E₂ (6 electron groups):

150

Common mix-up: trigonal planar vs trigonal pyramidal. Quick difference?

151

Common mix-up: tetrahedral vs square planar. Quick difference?

152

Common mix-up: seesaw vs tetrahedral. Why isn't SF₄ tetrahedral?

146

Because lone pairs and different bond types change repulsions and distort the ideal geometry.

entermedschool.org

145

$90^\circ, 180^\circ$

entermedschool.org

148

T-shaped

entermedschool.org

147

Largest to smallest (tetrahedral-based): CH_4 (109.5) > NH_3 (~107) > H_2O (~104.5).

entermedschool.org

150

Trigonal planar has 0 lone pairs (AX₃).
Trigonal pyramidal has 1 lone pair (AX₃E₁).

entermedschool.org

149

Square planar

entermedschool.org

152

SF_4 has 5 electron groups (4 bonds + 1 lone pair) -> trigonal bipyramidal electron geometry -> seesaw.

entermedschool.org

151

Tetrahedral is 4 domains total. Square planar is 6 domains total (AX₄E₂).

entermedschool.org

153

Common mix-up: T-shaped vs trigonal planar. Why isn't ClF_3 trigonal planar?

154

Common mix-up: XeF_2 vs CO_2 . Both are linear, but the electron geometry is...

155

If a question says 'linear but has 5 electron groups', what AXE must it be?

156

If a question says 'square planar', what electron geometry is hiding behind it?

157

Shape confusion fix: trigonal pyramidal = $\text{AX}_3\{\{c1::E1\}\}$; trigonal planar = $\text{AX}_3\{\{c2::E0\}\}$.

158

VSEPR: NO_2^- (around central N) shape and angle?

159

VSEPR: NO_2^+ (around central N) shape and angle?

160

VSEPR: NH_2^- (around central N) shape and angle?

154

CO₂: 2 domains (linear electron geometry). XeF₂: 5 domains (trigonal bipyramidal electron geometry).

entermedschool.org

153

ClF₃ has 5 electron groups (3 bonds + 2 lone pairs) -> trigonal bipyramidal electron geometry -> T-shaped.

entermedschool.org

156

Octahedral.

entermedschool.org

155

AX₂E₃.

entermedschool.org

158

Bent; <120°.

entermedschool.org

157

Shape confusion fix: trigonal pyramidal = AX₃E₁; trigonal planar = AX₃E₀.

entermedschool.org

160

Bent; <109.5°.

entermedschool.org

159

Linear; 180°.

entermedschool.org

161

VSEPR: H_3O^+ (around central O) shape and angle?

162

VSEPR: SO_4 (around central S) shape and angle?

163

VSEPR: ClO_3^- (around central Cl) shape and angle?

164

VSEPR: PCl_3 (around central P) shape and angle?

165

VSEPR: COCl_2 (phosgene) (around central C) shape and angle?

166

VSEPR: CH_2O (formaldehyde) (around central C) shape and angle?

167

VSEPR: C_2H_4 (each C) (around central C) shape and angle?

168

VSEPR: C_2H_2 (each C) (around central C) shape and angle?

162

Tetrahedral; 109.5° .

entermedschool.org

161

Trigonal pyramidal; $<109.5^\circ$.

entermedschool.org

164

Trigonal pyramidal; $<109.5^\circ$.

entermedschool.org

163

Trigonal pyramidal; $<109.5^\circ$.

entermedschool.org

166

Trigonal planar; $\sim 120^\circ$.

entermedschool.org

165

Trigonal planar; $\sim 120^\circ$.

entermedschool.org

168

Linear; 180° .

entermedschool.org

167

Trigonal planar; $\sim 120^\circ$.

entermedschool.org

169

Shape of NO_3^- (nitrate):

170

Shape of SO_4^{2-} (sulfate):

170

Tetrahedral

entermedschool.org

169

Trigonal planar
